EUROPEAN PRICE REPORT

Latest trends

Easter was the main consumption period of seafood, especially in the Southern part of the continent. Prices are still going up as consumer interest continues strong, and practically all price levels are accepted by the consumers. In the present issue of the European Fish Price Report, prices increased for 25 percent of the recorded prices; for 20 percent they declined, while 55 percent stayed stable. Overall, salmon prices fell somewhat after the sky-high levels reached in March 2023. Cod prices decreased somehow, while sole prices continued to rise. Shrimp prices started to move upwards after months of relatively low price levels.

At the end of the month, the seafood industry of Europe will meet in Barcelona. The interest of the sector in the event is strong, and critical business decisions will be taken at this event.

The container cost index increased by 4 percent in the third week of April, the first increase in 15 weeks. But it is still 78 percent lower if compared to the same week last year. The index is USD 1 778 per 40-foot container, 83 percent below the peak of USD 10 377 in September 2021.

The Global Container Freight Index (FBX) quoted USD 2 214 on 27 January 2023 compared to USD 9 806 in January 2022. The current index is well below last year's level but still much higher than pre COVID-19 levels which, for example, quoted USD 1 358 on 6 March 2020. Nevertheless, current container prices may ease transport of frozen freight to Europe, with the exception obviously of disruption that may be caused from geopolitical tensions.

The European Fish Price Report, based on information supplied by industry correspondents, aims to provide guidance on broad price trends. Price information is indicative and should be used only for forecasting medium- and long-term trends. FAO is not responsible for any errors or omissions.

GROUND FISH

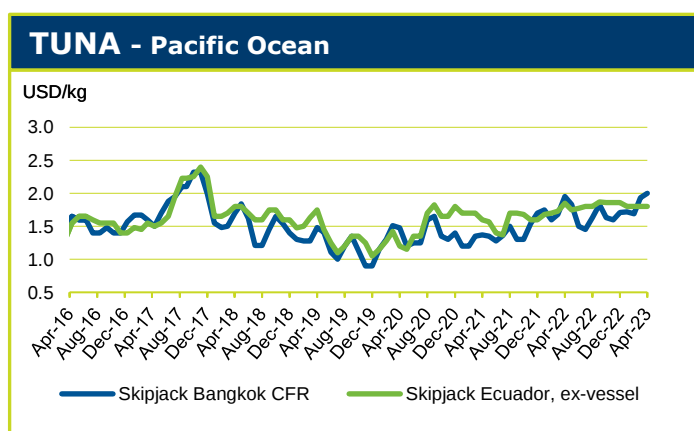

In Europe, consumption of wet-salted cod fillets from frozen raw material (*Gadus macrocephalus*) and wet-salted cod fillets (*Gadus morhua*) from fresh raw material of Faroese and Icelandic is falling at this time, after strong sales just before Easter. Unfortunately, fishing for *Gadus morhua* in Norway did not go as expected, so prices did not come down as anticipated. Overall it is a "wait and see" situation at the moment.

Alaska pollack trade returned to pre-COVID-19 levels in 2022. The export levels of frozen H&G Alaska pollack were back to 2019, with the Russian Federation as the leading supplier. Some of the products used to be channelled through the Republic of Korea to the Chinese market when the COVID-19 restrictions early in 2022 made direct sales difficult, but this issue is back to normal after the decision of the Chinese government to stop the zero-COVID-19 policy. Alaska pollack is excluded from trade embargoes by the United States of America and the European Union with regard to Russian products.

TUNA - BILLFISHES

Fishing in the Western and Central Pacific (WCP) continues to be very poor. However, there is limited buying interest from Thailand canneries despite having low raw material inventories at current prices in conjunction with the Songkran holidays. Some canneries are also extending the holiday closure to conserve raw materials. Skipjack prices continue to go up.

Catching in the Indian Ocean is reported to be good. Some cargoes continued to be transhipped to carriers and diverted to other markets, especially in Asia, due to the short supply from WCP. Both skipjack and yellowfin prices increased in line with Bangkok's price levels.

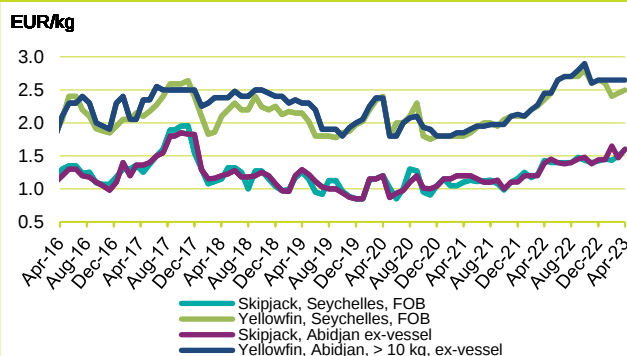

TUNA – BILLFISHES (cont.)

Fishing in the Atlantic Ocean is improving but still relatively slow, and local canneries continue to report a shortage of raw materials. Skipjack prices increased while yellowfin prices remained stable.

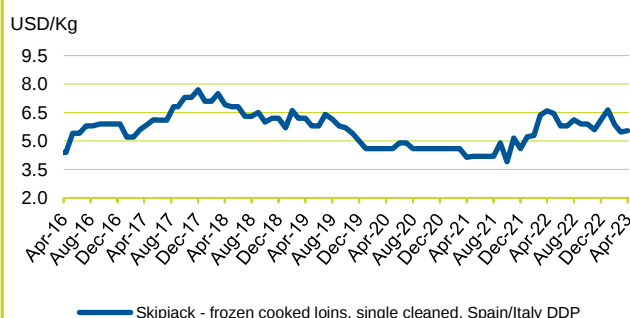

Fishing in the Eastern Pacific Ocean continues to be good, with a 10 percent increase in quantity year-on-year. Skipjack prices remain stable but are below Bangkok's price levels for the first time in history—however, the yellowfin price declines due to lower demand.

European prices for skipjack remained stable while prices for yellowfin increased. The indicative price for cooked, single-cleaned skipjack loins continues to fall due to lower demand.

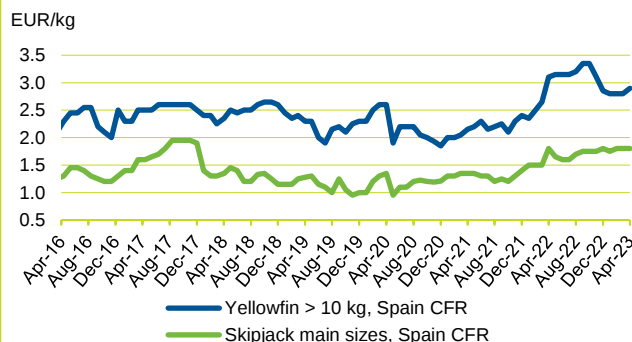

TUNA - Indian/Atlantic Oceans

TUNA - Loins

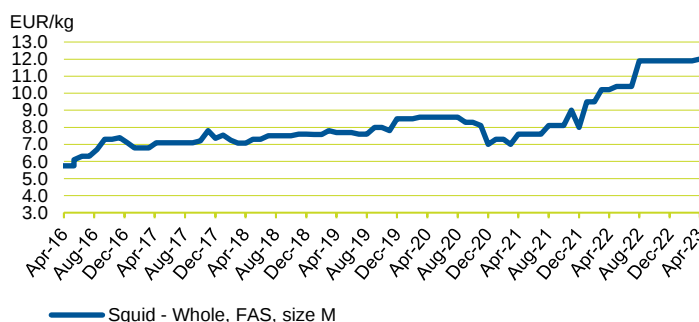

TUNA - Spanish canneries

CEPHALOPODS

Demand is robust for cephalopods at the moment, leading to sky-high prices. Squid and octopuses command premium prices after months of relatively low prices, especially for octopuses. Traders are stocking up for the summer demand due to the tourist season, which is expected to be very strong after three years of lockdown due to COVID-19.

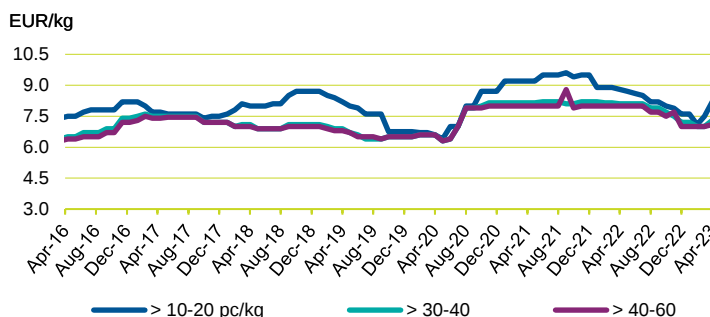

SQUID - in Italy, origin: South Africa

CRUSTACEANS

Prices of Argentine shrimp are going up after months of slow sales, mainly due to strong demand during the Holy Week. In addition, catches will continue to slow until July, so the market will be under-supplied, particularly for bigger sizes.

ARGENTINA RED SHRIMP - origin: Argentina

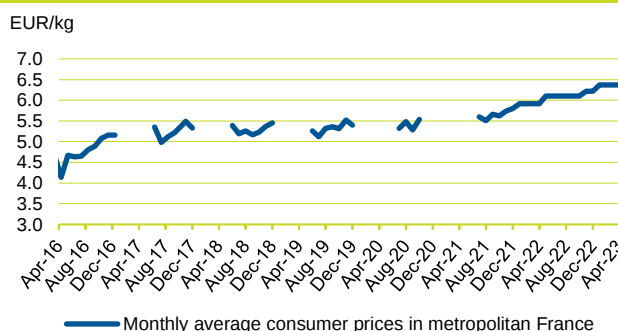

The Brexit impact impacted Norway lobster (called in Ireland Dublin Bay prawns) on catch quota. Ireland received 14 percent less quota for this species in 2022. Despite this reduction, Irish exports of frozen Norway lobster stayed stable at USD 67 million due to a substantial increase in Norway lobster prices. In fact, the quantity exported declined between 2021 and 2022 from 5 200 tonnes to 4 600 tonnes.

Crab prices are sky-high, in line with other crustaceans. European lobster is in very slow supply, the main production period is just about to start, and price levels are incredibly high.

BIVALVES

Chile is a main supplier of mussels to the world market. This product enters the market under the HS code 160553. In 2022, exports declined from 98 000 tonnes to 92 000 tonnes, mainly due to lower exports to the Russian Federation. In the first two months of 2023, exports recovered. 13 225 tonnes were exported in these two months, 16 percent more than in 2022. The European Union remains the main market, with 6 000 tonnes or 45 percent of all Chilean mussel exports. Spain is the main single market taking 2 523 tonnes in the first two months of 2023, 83 percent more than last year. However, the Russian Federation recovered strongly, from 1 860 tonnes in the first two months of 2022 to 2 245 tonnes in the same period of 2023, reaching very close to the Spanish amount. The unit value of Chilean mussels increased by 8 percent in February 2023, compared to February 2022, to reach USD 3.00 per kg.

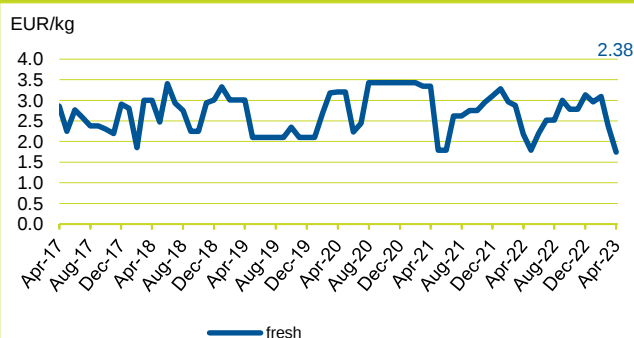

MUSSEL BOUCHOT - in France

SMALL PELAGICS

Ireland experienced a substantial reduction in mackerel production due to Brexit, which led to a 26 percent cut in the Irish mackerel quota, corresponding to 12 000 tonnes less mackerel quota, worth EUR 18 million. Exports of frozen mackerel from Ireland were reduced due to lower landings. In 2022, some 43 000 tonnes of frozen mackerel were exported, some 11 000 tonnes less than in 2021. Main reductions in exports were reported from the EU market, which reduced imports of frozen Irish mackerel from 19 000 tonnes in 2021 to 10 000 tonnes in 2022. The foreign exchange income from frozen mackerel exports declined sharply year-on-year from USD 120 million in 2021 to USD 90 million in 2022. The primary market for frozen mackerel from Ireland was Nigeria, overtaking China. Irish fishers are requesting reimbursement for the loss in income due to Brexit.

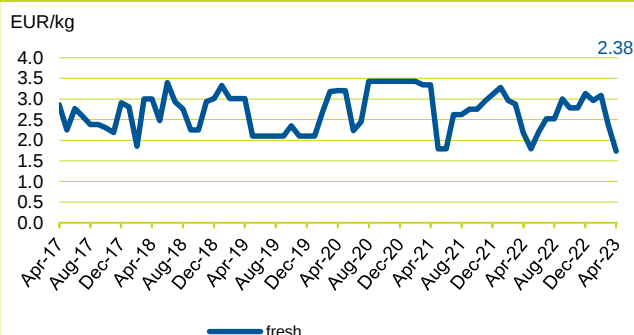

Mackerel - in Italy, origin: France

SMALL PELAGICS (cont.)

In general, prices of small pelagic are trending downward due to improved fishing in the Northern part of the continent and declining fuel prices. In fact, fresh mackerel in Italy was traded at EUR 2.38 per kg, the lowest level recorded in recent years.

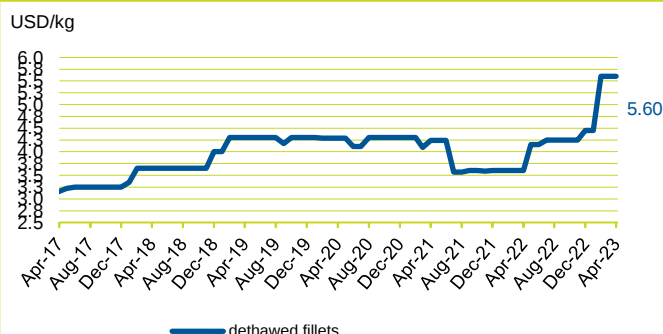

Mackerel - in Italy, origin: France

FRESHWATER

Frozen catfish fillets imports into the European Union reached USD 223 million in 2022, a 60 percent increase over 2021. The Kingdom of the Netherlands was the main importing country, with USD 54 million, followed by Germany, Belgium and Spain. Viet Nam is the leading supplier of this product to the EU market, while the Kingdom of the Netherlands is a central importing hub for sending products to neighbouring countries.

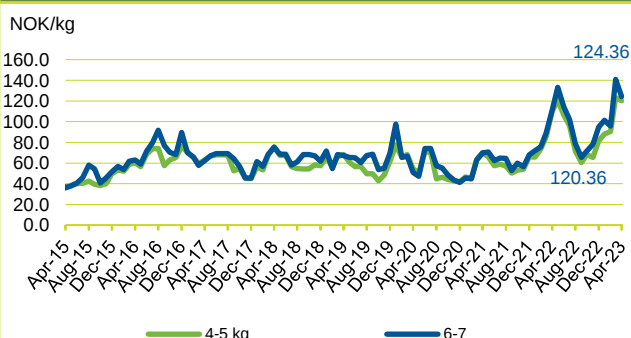

Pangasius - in Italy, origin: Viet Nam

SALMON

Prices for Norwegian farmed Atlantic salmon continued to grow from NOK 102.30 at week 8 to NOK 111.59 at week 11 but then fell to NOK 101.26 at week 13, meaning a 2.73 decline compared to the previous week (12), according to the NASDAQ Atlantic Salmon Index (2-3 kg) in March-April.

Salmon - origin: Norway

SALMON (cont.)

Norwegian seafood exports have come through a historically strong quarter of the year in value. A significantly weaker Norwegian krone, food inflation and price growth in the markets for species, including salmon, is the primary explanation for the growth. Norway exported 263 600 tonnes of salmon worth NOK 28.8 billion in the period, which meant a decline of 6 percent in terms of volume but a significant increase of 24 percent in value compared to the first quarter of last year. According to analysts, this volume decline has helped lift prices to historical highs in the short term.

A weakening global supply of salmon, growth in demand coupled with a strong dollar support the explosive growth of exports to that market. Poland, the United States of America and France were the biggest markets for salmon in the first three months of the year and exports specifically to the US market saw the largest increase in value, up 53 percent. In addition, there is still a shift in salmon purchases towards increased restaurant consumption after the pandemic, while home consumption remains high. In monthly terms, overall Norwegian exports of salmon in March accounted for 93 700 tonnes worth NOK 11.3 billion, which meant a decline of 4 percent in volume but a notable increase of 34 percent in value compared to March last year.

TROUT

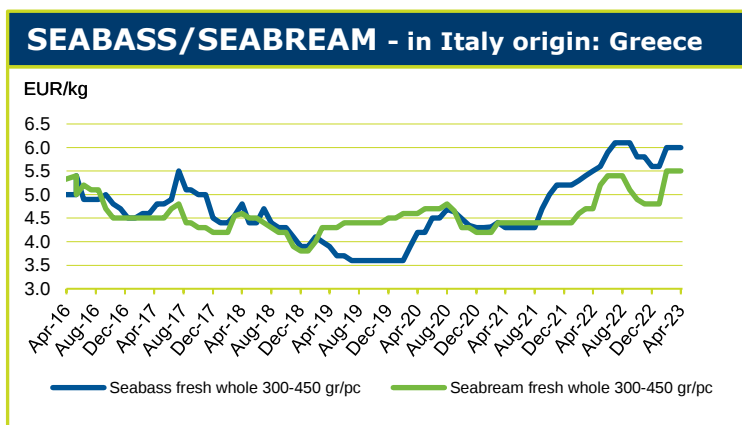

Norway exported 10 200 tonnes of trout worth NOK 1.1 billion in the first quarter of 2023, which meant a decline of 12 percent in terms of volume but a significant increase of 18 percent compared to the first quarter of last year. In addition, Norway exported 4 100 tonnes worth NOK 480 million specifically in March, which meant important increases of 27 percent and 71 percent, respectively, compared to the third month of 2022. In terms of markets, the United States of America, Thailand and Lithuania were the most important during the period.

The price of fresh trout fillets reached historic highs in the first quarter, at NOK 143 per kg, meaning an increase of NOK 7 compared to the previous record quarter, the fourth quarter of 2022. In addition, fresh whole trout also reached a record price high after registering NOK 108 per kg, up NOK 8 compared to the previous record registered in the second quarter of 2022.

SEABREAM/SEABASS

While final sale prices have been high this year, rising production costs remain a primary concern for farmers and have largely offset any benefits from higher prices. A Greek producers organization recently complained that farmers were operating at a loss, with quoted first-sale prices of EUR 5.30 per kg for seabass and EUR 4.80 per kg for seabream. At the same time, production costs had risen to EUR 5.50 per kg. Consumption forecasts indicate weak demand in Italy and France, the major markets for seabass and seabream, as a result of a reduction in the disposable income of consumers amid inflationary pressures. As such, 2023 may well be another challenging year for producers.

Supplies of seabass and seabream from Türkiye, the leading global producer of both, have been below levels seen in previous years. In the second half of 2022, Turkish exports amounted to some 53 000 tonnes, 16 percent below the same period in 2021. Data for January 2023, the most recent available at the time of writing, indicate a noticeable rise in monthly export volumes. However, low stocks mean that supply remains tight, especially for seabream. The massive Türkiye–Syria earthquake of February 2023 appears to have had little effect on the supply of seabass and seabream, with farms unaffected and national logistics able to adapt to the challenges.

Prices remain high and stable across all gradings of seabass, as firm demand pushed prices to 23 percent higher than last year (MERCAMADRID, wholesale Spain). Prices for small and medium seabream fell considerably in April, with both gradings now 14 percent below their February peak.
